## FREQUENTLY ASKED QUESTIONS

### **What is Ultraformer™ Therapy?**

Ultraformer therapy is a non-invasive skin lifting and tightening treatment with no downtime that has been proved quite safe by being used in over 200,000 treatments worldwide.

### **How does it work?**

Ultraformer delivers high intensity focused ultrasound to the various and deep layers beneath the skin. This creates thermal energy safely heating the tissue to result in contraction and tightening of the skin.

### **How long does it take?**

A full face and neck treatment takes approximately an hour in the clinic, or 30 Minutes for a smaller area such as eyes or smile lines. Hayley from Ultraformer usually performs a thorough consultation for each new patient taking an additional 30 minutes to ensure all questions are answered and nothing is left out.

### **What areas can be treated?**

The neck, jawline, jowls (cheeks), naso-labial folds (smile lines) and eye area are the most popular areas treated with Ultraformer.

### **How long does it last?**

Most clients see and feel an immediate lift and tightening on the day of treatment with results improving over the following 2-3 months. One treatment every 12 months is recommended for maintenance.

### **What is the downtime?**

There is actually NO significant downtime associated with the Ultraformer treatments. Some clients can experience mild redness during and after the treatment with occasional reports of mild swelling and bruising however still, no significant down time.

### **Is Ultraformer™ treatments painful?**

Most clients can tolerate the treatment very well. Some tingling and transient discomfort as the energy is delivered can be expected however this varies between individuals so we do recommend patients take paracetamol prior to their visit.

### **Can I have Ultraformer™ after other skin treatments?**

We recommend you wait 4 weeks following laser, IPL, peels, facial threading or needling, and 6 weeks after dermal filler in the treatment area

### **Are men good candidates for Ultraformer™?**

Men also experience decreased skin laxity and sagginess “over the collar” just as women do. Many of our male clients appreciate the fact that this treatment has no significant recovery time.
